

Triangles

Exterior and Interior Angles of a Triangle

For any Δ
 $x + y = z$

$m \angle 2 = \underline{\hspace{2cm}}$

$38 + 31 = m \angle 2$

$69^\circ = m \angle 2$

Find the measures of the angles indicated.

14. If $m \angle 1 = 93$ and $m \angle 3 = 121$, $m \angle 2 = \underline{\hspace{2cm}}$
