

## Review: Solve using addition

$$\begin{cases} x + 3y = 13 \\ 6x - 3y = -27 \end{cases}$$

## 3.2 Addition Day 2 (mult. by -1)

- Must be lined up
- Must have opposites-add equations together
- Solve
- Substitute
- Solution (x, y)

$$1. \begin{cases} 2x + 3y = 9 \\ 2x + 2y = 8 \end{cases}$$

$$2. \begin{cases} 2x + 5y = 13 \\ -5x + 5y = 20 \end{cases}$$

$$3. \begin{cases} 2x - 5y = 22 \\ 2x - 3y = 6 \end{cases}$$
