

3.2 Elimination Method

***Elimination is same as Linear
Combination**

Goal: Get opposites of a variable to be
ELIMINATED!

$$1. \begin{cases} 5x - 2y = 4 \\ 3x + y = 9 \end{cases}$$

$$2. \begin{cases} 5x - 3y = 16 \\ 4x + 5y = -2 \end{cases}$$

$$3. \begin{cases} -3x + 7y = -1 \\ -2x + 5y = 0 \end{cases}$$
